

vario-plate brand shims are U-shaped single discs made of stainless steel. The shims are mainly used for vertical distance adjustment of motors, pumps, turbines and generators in mechanical and plant engineering as well as in maintenance. vario-plate brand shims feature a drilled tab (18 mm) and an easy-open insertion slot that allows for easy insertion and removal. The outer corners are rounded with a radius of 6 mm. On request, the plates are also available printed with your logo. Standard vario plates are made of stainless steel 1.4301 (AISI 304) and are available in various sizes. Their thicknesses range from very thin foil (0.05 mm) to 2 mm thick sheet.

vario-plate brand shims are available immediately from stock as individual sheets or in assorted assembly sets.

Material	Stainless steel 1.4301 / 1.4310
